

CAREA PANEL MAINTENANCE

CAREA PANELS REQUIRE NO SPECIAL MAINTENANCE. The combination of the raw material used and the high pressure and high temperature molding process makes the panels non-porous.

EASY CLEANING : Because they are non-porous, the panels do not hold dirt. Rain water alone is usually enough to keep the panels clean. You may also use soapy water in a pressurized spray to clean stubborn dirt.

GRAFFITI RESISTANT : Pollutants such as paint, grease, oils and smoke will not normally soak into the material; the panels can therefore be completely restored with the help of cleaners and solvents. When cleaning off graffiti, we recommend that you try your cleaning method on a small part of the panel before beginning the entire job.

The following products are **RECOMMENDED FOR CLEANING ALL CAREA PANELS :**

- **ACETONE SOLVENT** (most effective)
- **GRAFFITOFF™**
- **DOMESTIC SOAP WITH PRESSURIZED WATER**

For stubborn stains such as permanent marker or spray paint, it is recommended that you use acetone with a cloth to remove the stain.

For Textured Panels (Riverstone/Armorstone), it is recommended that you remove stains, in small sections, using a circular motion; making sure not to spread the stain further. Using a soft-haired bristle brush will further help remove the stain. **(DO NOT ATTEMPT ON SMOOTH PANELS)**

DO NOT, IN ANY CASE, SAND OR SCRAPE PANEL SURFACES.

Note : Please do not hesitate to contact us for further assistance.
